

ABSTRACT OF THE DISCLOSURE

The present invention provides a method for a scripting tool, a scripting tool, and computer program product which carries out a method for a scripting tool, to create a script for executing a sequence of commands. The scripting tool receives and processes a sequence of commands and then receives an indication of one of a plurality of scripting languages. Based on this information the tool then creates a script, in the scripting language indicated, containing the sequence of commands. The script may then be run in an execution environment which supports that scripting language and is independent of the scripting tool.
